SUMMARY

Full-stack developer (React, Node.js, PostgreSQL) and Smart India Hackathon 2024 winner. Built and deployed reporting and tracking systems used at CSJMU University, with experience in role-based workflows, REST APIs, Docker, and geospatial dashboards.

EDUCATION

Chhatrapati Shahu Ji Maharaj University, Kanpur

2023 – 2027(Expected)

B.Tech in Computer Science | CPI: 8.81 / 10

PROJECTS

Daily Report – CSJMU Institutional Reporting System

React 19, Vite, Tailwind CSS, Node.js, PostgreSQL, Docker

- Built a role-based reporting portal modelling the real approval flow (Organization → Head/Director → Review → Final Submission → Administration) for university departments.
- Designed the PostgreSQL schema and REST APIs for report submission, review states, and organization-specific reporting.
- Implemented automatic bullet-point summaries generated from database queries, local-time handling, and Docker-based deployment.

Copy-Tracking Dashboard – CSJMU Examination System

React, Node.js, SQL, REST APIs

- Digitised tracking of physical answer-copy bundles sent by post, replacing manual checks by exam staff.
- Aggregated expected, received, and pending copies from ~10,000 examination records, with centre-wise, course-wise, and exam-date views.
- Added a business rule that raises an alert when copies are still pending one day after the exam date, plus reports and centre-code lookup.

DDAS – Data Duplicate Detection System (Ministry of Earth Sciences)

React, JavaScript, Node.js, REST APIs, React Joyride

- Built the admin dashboard for a system that detects duplicate NetCDF scientific datasets across an organization's network to cut storage and bandwidth use.
- Developed duplicate statistics, alerts, system-status monitoring, analytics, and recommendations views, with a dashboard metric for bandwidth/storage saved.
- Implemented token-based authentication, API integration, a guided onboarding tour, and a consistent theme system.

OrbitGuard – Satellite Collision Monitoring System

React, Vite, Node.js, Express, PostgreSQL, Leaflet, satellite.js, Docker

- Tracked 14 satellites using Celestrak TLE data and SGP4 propagation (satellite.js) to compute positions and flag close approaches within a 10 km threshold.

- Built Express APIs with PostgreSQL storage, an alert dashboard, and an interactive Leaflet map for orbit visualization; deployed with Docker.

Other Projects

- **Vinayak Inter College website** (vinayakintercollege.in): Deployed school website featuring an online admission system.
- **SecureDrop** (Cyber Hackathon, Bihar): Bilingual (English/Hindi) secure document-sharing frontend with authentication, access control, and document tracking.
- **Simhastha Hackathon, Bhopal (Govt. of MP)**: Crowd-management dashboard in React with modular tile components and a spatial prediction backend.

HACKATHONS & ACHIEVEMENTS

- **Winner, Smart India Hackathon 2024 (Software Edition)** – December 2024
- **Finalist, Smart India Hackathon 2025**
- **Winner, Cyber Hackathon (Bihar)**
- Participant: Simhastha Hackathon 2025 (Govt. of MP), ASTRA 2025 (DTU, Delhi)

TECHNICAL SKILLS

Languages: C, C++, Python, JavaScript, SQL

Frontend: React, Vite, Tailwind CSS, HTML, CSS, Leaflet

Backend & Data: Node.js, Express, PostgreSQL, REST APIs, Docker

Tools: Git, GitHub, Vercel

EXTRACURRICULAR

Organising member of BobHacks'26 Hackathon and Hackshodh
